PROJECTS

- **Scramble** | *Django, Python, HTML, CSS*

Personal Project

- Create a Django App that allows users to play a word game
- Users can compare score with the daily word, against other users' scores
- Users can access a random generated set of games to play using a seed, in order to play the same random set with other users

- **Progranimate** | *React, Typescript, Vite/Vike, Node.js*

Capstone Project with 2 other partners

- Capstone Project that was inherited from multiple other group iterations:
- Progranimate is a web application that allows for learning python by offering a visual graph to show the steps of the script:
- It is a whole service that teachers can use to set up excercises/assignments and assign to groups of students:
- Exercises can be made with special requirements that a program should meet, such as how many loops to use.:

- **4 Player Chess Program** | *Java*

School Project with 3 other Partners

- School Project to play chess with up to four players:
- Full Graphics done using the Java Effects Library:

- **Secure Peer to Peer Communication** | *Python*

School Project done solo

- School Project to set up a Peer to Peer connection over tcp and securely chat:
- Application uses Certificate Verification, RSA signing, and AES encryption for fully secure communication:
- Application promises Authenticity, Non-Repudiation, and confidentiality:
